SUMMARY

Detail-oriented and analytically driven data science student with hands-on experience in data cleaning, exploratory data analysis, statistical modeling, and data visualization. Proficient in Python, SQL, and Excel with a strong foundation in machine learning, ETL pipelines, and dashboard creation. Passionate about transforming raw data into actionable insights and building end-to-end data solutions. Eager to apply analytical skills and technical expertise to solve real-world business problems in a collaborative, fast-paced environment.

TECHNICAL SKILLS

Programming Languages:	Python, SQL, JavaScript, HTML/CSS
Data Analysis & ML:	Pandas, NumPy, Scikit-learn, SciPy, Statsmodels, Matplotlib, Seaborn
Databases:	MySQL, PostgreSQL, MongoDB
Visualization Tools:	Excel, Tableau, Matplotlib, Seaborn
Tools & Platforms:	Git, GitHub, Jupyter Notebook, VS Code, Google Colab
Other:	ETL Pipelines, Data Cleaning, Statistical Analysis, EDA, Feature Engineering

PROJECTS

Google Play Store Ecosystem Strategy Dashboard

GitHub ↗

Tableau, Python, Pandas, SQL, Excel, ETL Pipeline

- Analyzed 2.3M+ Google Play Store applications to identify actionable business strategies for app discovery, user engagement, and monetization improvement.
- Developed a comprehensive 5-page industry-level dashboard in Tableau with advanced features including Drill-downs, KPI cards, and an interactive Category-Rating-Installs Heatmap.
- Evaluated market opportunities by cross-referencing low competition with high install rates, discovering key niches for developer optimization and strategic investments.
- Investigated the correlation between user ratings, app size, pricing, and installation numbers to provide concrete insights on revenue generation and app quality.

Enterprise-Grade Cafe Sales Analytics Dashboard

GitHub ↗

Google Sheets, Pivot Tables, Data Cleaning, Dashboard Visualization

- Engineered an end-to-end data pipeline transforming 10,000 raw transaction records into 6,658 analytics-grade entries, successfully resolving $2,847 in miscalculated revenue.
- Designed an interactive KPI dashboard using Google Sheets, delivering 14 actionable operational metrics for menu engineering, staffing optimization, and payment strategy.
- Implemented comprehensive temporal and payment behavior analyses, identifying monthly revenue trends and channel preferences to maximize business ROI.
- Maintained academic integrity and 100% data reproducibility through a fully documented methodology tracking deterministic transformation rules.

F1 Race Strategy Intelligence

GitHub ↗

Python, Pandas, Tableau, Hypothesis Testing, ETL Pipeline

- Analyzed how strategic execution — qualifying precision, pit stop efficiency, and circuit tactics — drives Constructor Championship outcomes.
- Built a 5-notebook ETL pipeline processing 726,600+ records across 76 F1 seasons and 111 attributes from the Ergast dataset.
- Engineered Grid-to-Finish Excellence Delta and Operational Efficiency Score KPIs; applied hypothesis testing to quantify pit strategy value.
- Built Tableau dashboards comparing 1-stop vs 2-stop strategies across circuit types and led a 7-member cross-functional team.

The Efficiency of Speed — F1 Hybrid Era (2014–2025)

GitHub ↗

Python, Pandas, SciPy, Tableau, Data Cleaning

- Investigated whether F1 races in the Hybrid Era (2014–2025) are won through raw track pace or pit lane execution.

- Built and merged 7 relational CSV tables (races, results, pit_stops, lap_times, drivers, etc.) using Pandas and engineered a Pace Retention Rate metric.
- Applied SciPy statistical analysis and built Tableau dashboards to visualize Position Delta vs pit stop duration across circuit categories.

Hospital Readmission Optimization GitHub ↗

Google Sheets, Excel, Data Cleaning, Dashboard Visualization

- Analyzed 14,116 patient records from 130 US hospitals (1999–2008) to perform full data cleaning pipeline and identify testing gaps.
- Quantified $20.49M in revenue leakage; identified 83.1% A1C testing gap and 56% emergency admission share.
- Built Google Sheets dashboard with dynamic filters and delivered 4 recommendations projected to save $1–2M annually.

Hindalco vs NALCO — Financial Ratio Analysis GitHub ↗

Excel, Tableau, Financial Modeling, Ratio Analysis

- Compared Hindalco Industries and National Aluminium Company across FY22–FY25 using 16+ key financial ratios including liquidity, profitability, efficiency, and valuation metrics.
- Built detailed Excel dashboards with consolidated income statements, balance sheets, and common-size financial statements.
- Derived investment recommendations based on NALCO's superior profitability (ROE 29.5% vs 13%) and Hindalco's stronger asset efficiency, visualized with Tableau.

EDUCATION

Bachelor of Technology (B.Tech) — Computer Science / Data Science *2024 – 2028*

Rishihood University, Sonipat, Haryana

CGPA: 7.2 / 10.0
